GENERATOR SALES & SERVICE

164 East Street, Foxboro, MA 02035

Semi-Annual Critical Pre-Storm Service

Protect Your Investment & Your Family

Your generator is a complex system and is exposed to extreme weather conditions. All generators require periodic oil and filter changes to ensure maximum performance for years of reliable service.

It is recommended that your system be checked twice annually to ensure peak performance during potential outages. Our factory trained technicians service, check and adjust these critical systems so that preventable problems don't hinder your family's protection.

While performing these services during our normal business hours, 8am-4pm Monday - Friday, should we find anything that needs attention that is covered by your factory warranty we will automatically fix it at no cost. Repairs needed beyond the scope of this agreement will be billed at our current service rate, once approved with your permission.

RECOMMENDED TWICE ANNUAL CRITICAL SERVICE

- Check AC voltage and frequency and adjust if needed to factory specification
- Inspect all fuel lines for wear, cracks, and leaks
- Inspect exhaust system for leaks and safety
- Drain any accumulated moisture from condensation traps
- Inspect air shrouds for loose hardware and leaks; clean cooling fins
- For liquid cooled units, check antifreeze levels and condition; clean radiator of any debris.
- Inspect control wiring and connections
- Inspect electric cable connections as well as potential fraying of cables
- Check engine, starting, and charging systems
- Check alternator for proper battery charging
- Test protective automatic shutdowns
- Look for vibration and noise
- Inspect/check automatic transfer switch and weekly exercise operation
- Annual synthetic oil, filter, and spark plug change and coolant change on liquid cooled units
- Check, clean, and lube all linkages
- Check and clean all air passages, the air filter, and remove leaves etc.
- Check and adjust all controls
- Check and adjust valves if necessary
- Annually check operation by simulating electrical outage, transfer of loads, and shutdown
